SPECIFICATIONS

GENERAL

Mains voltage	: 120V - 220V - 240V
Voltage setting	: Serviceable set at 220V
Mains frequency	: 50Hz - 60Hz
Power consumption	: 85W max.

TUNER : FM SECTION

Tuning range	: 87.5MHz - 108MHz
IF frequency	: 10.7MHz
Aerial input	: 75 Ω dipole
Sensitivity at 26dB S/N	: <5 μ V
Selectivity at 600kHz bandwidth	: >30dB
IF rejection	: >60dB
Image rejection	: >25dB

TUNER : AM SECTION

Tuning range	MW : 522kHz - 1611kHz LW : 148kHz - 284kHz
IF frequency	: 450kHz
Sensitivity at 26dB S/N	MW : <3.0mV/M LW : <4.0mV/M
Selectivity at 18kHz bandwidth	: >20dB
IF rejection	: >26dB
Image rejection	MW : >28dB LW : >30dB

AMPLIFIER

Output power at 10% distortion	: 2 x 10W -1dB
Speaker impedance	: 2 x 8 Ω L/R
Frequency response within \pm 3dB	: 100Hz - 14kHz
Equalizer control	: -6dB to +6dB
Dynamic bass boost	: +6dB at 100Hz
Input sensitivity	Aux/CD : 400mV
Remote control	: 5V non-inverted RC5
Headphone output at 32 Ω	: 30mW

CASSETTE RECORDER

Number of track	: 2 x 2 stereo
Tape speed	: 4.76 cm/sec \pm 2% 2 x 4.76 cm/sec
Wow and flutter	: <0.35%
Fast-wind time C60	: 130 sec
Bias frequency	: 57kHz \pm 10kHz
Recording playback frequency response within -8dB	: 80Hz - 10kHz (Recording) 80Hz - 9kHz (NS Dubbing) 125Hz - 8kHz (HS Dubbing)
Signal to noise ratio	Rec : >44dB NS Dubbing : >42dB HS Dubbing : >36dB

RECORD PLAYER

Type of drive system	: Belt drive
Type of PU Head	: Sapphire (Magnetic stereo)
Stylus force	: 5.0gmf +1.5gmf/-1gmf
Speed	: 33 1/3 ; 45 rpm \pm 2.2%
Wow and flutter	: 0.3%
Rumble	: -30dB DIN A -50dB DIN B

ADJUSTMENT	CASSETTE	Recorder position			MEASURE ON	READ ON	ADJUST WITH	ADJUST TO
		SK...	DECK I	DECK II				
Azimuth	10KHz SBC 420*	Tape	Play	-	1258	mV-meter	Left hand Screw Play head	Max. L = R
		Tape	-	Play	1258	mV-meter	Left hand Screw R/P Head	
Motor speed (Normal)	3150Hz SBC420*	Tape	Play	-	1258	Wow and Flutter meter	preset in motor	** a
		Tape	-	Play	1258	Wow and Flutter meter	-	
Motor speed (high)	3150Hz SBC420*	Tape HS Dubbing	Record	Play	1258	Frequency counter	-	6.0KHz +/-0.3KHz

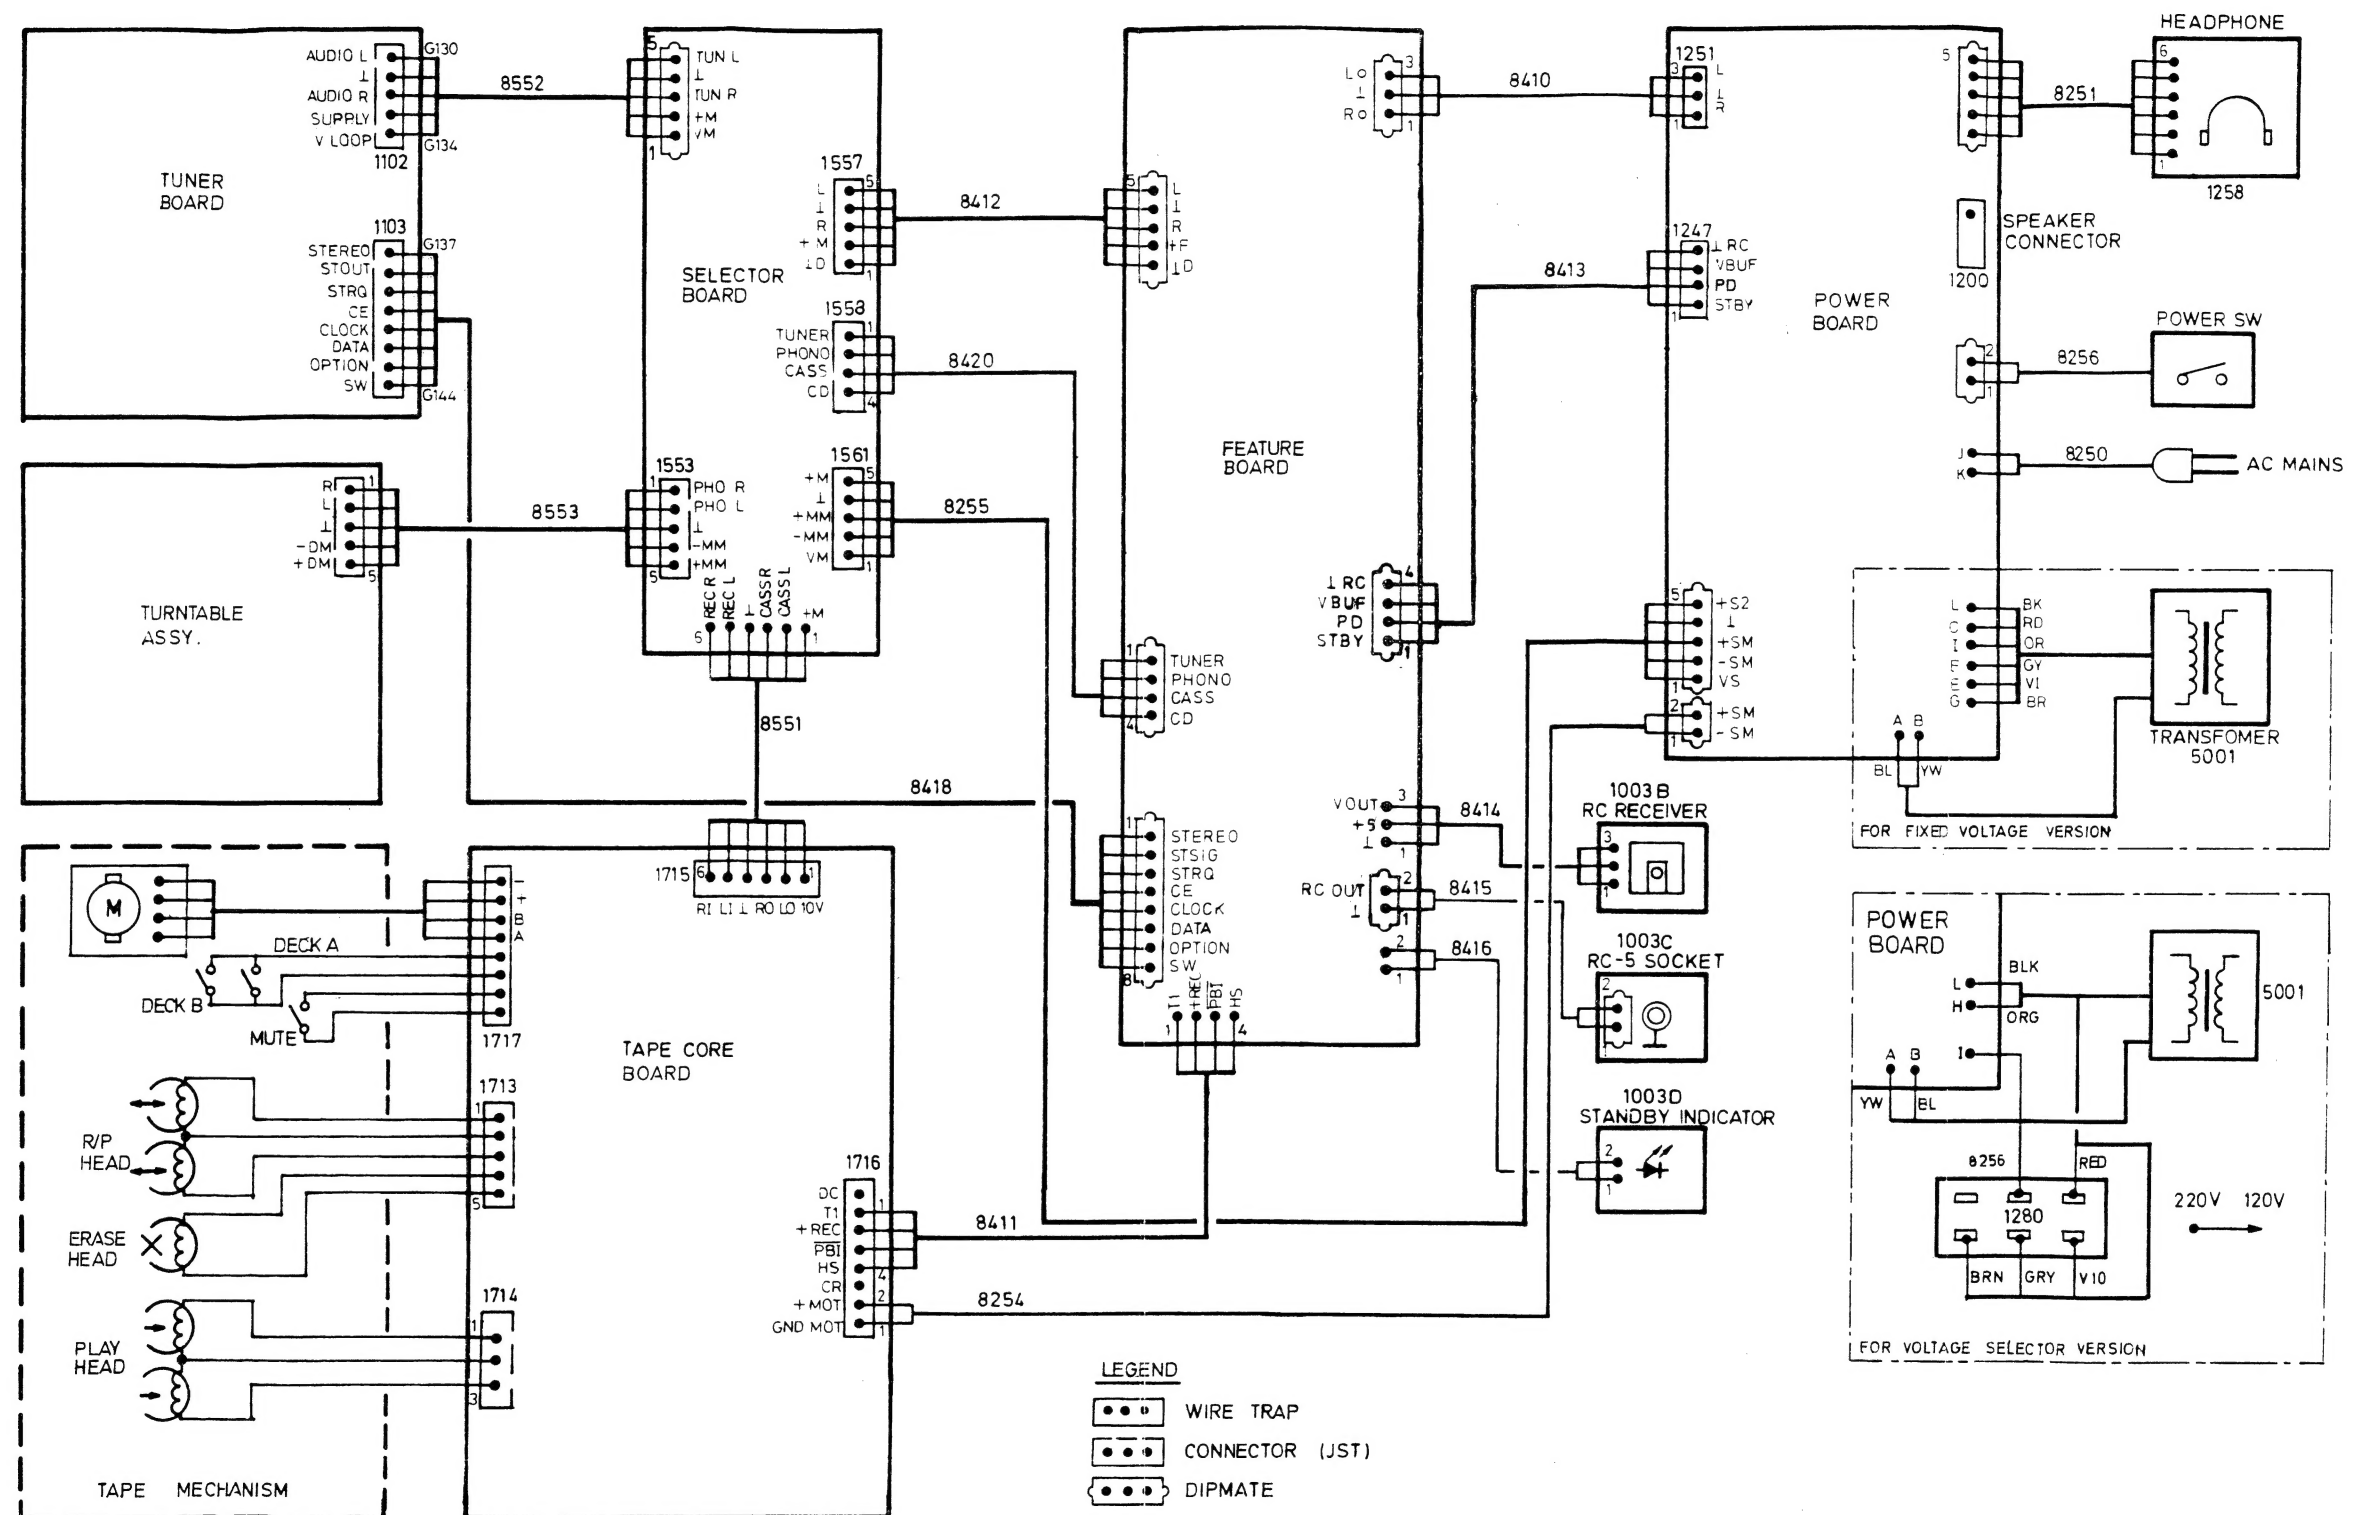

* SBC 420 : 4822 397 30071

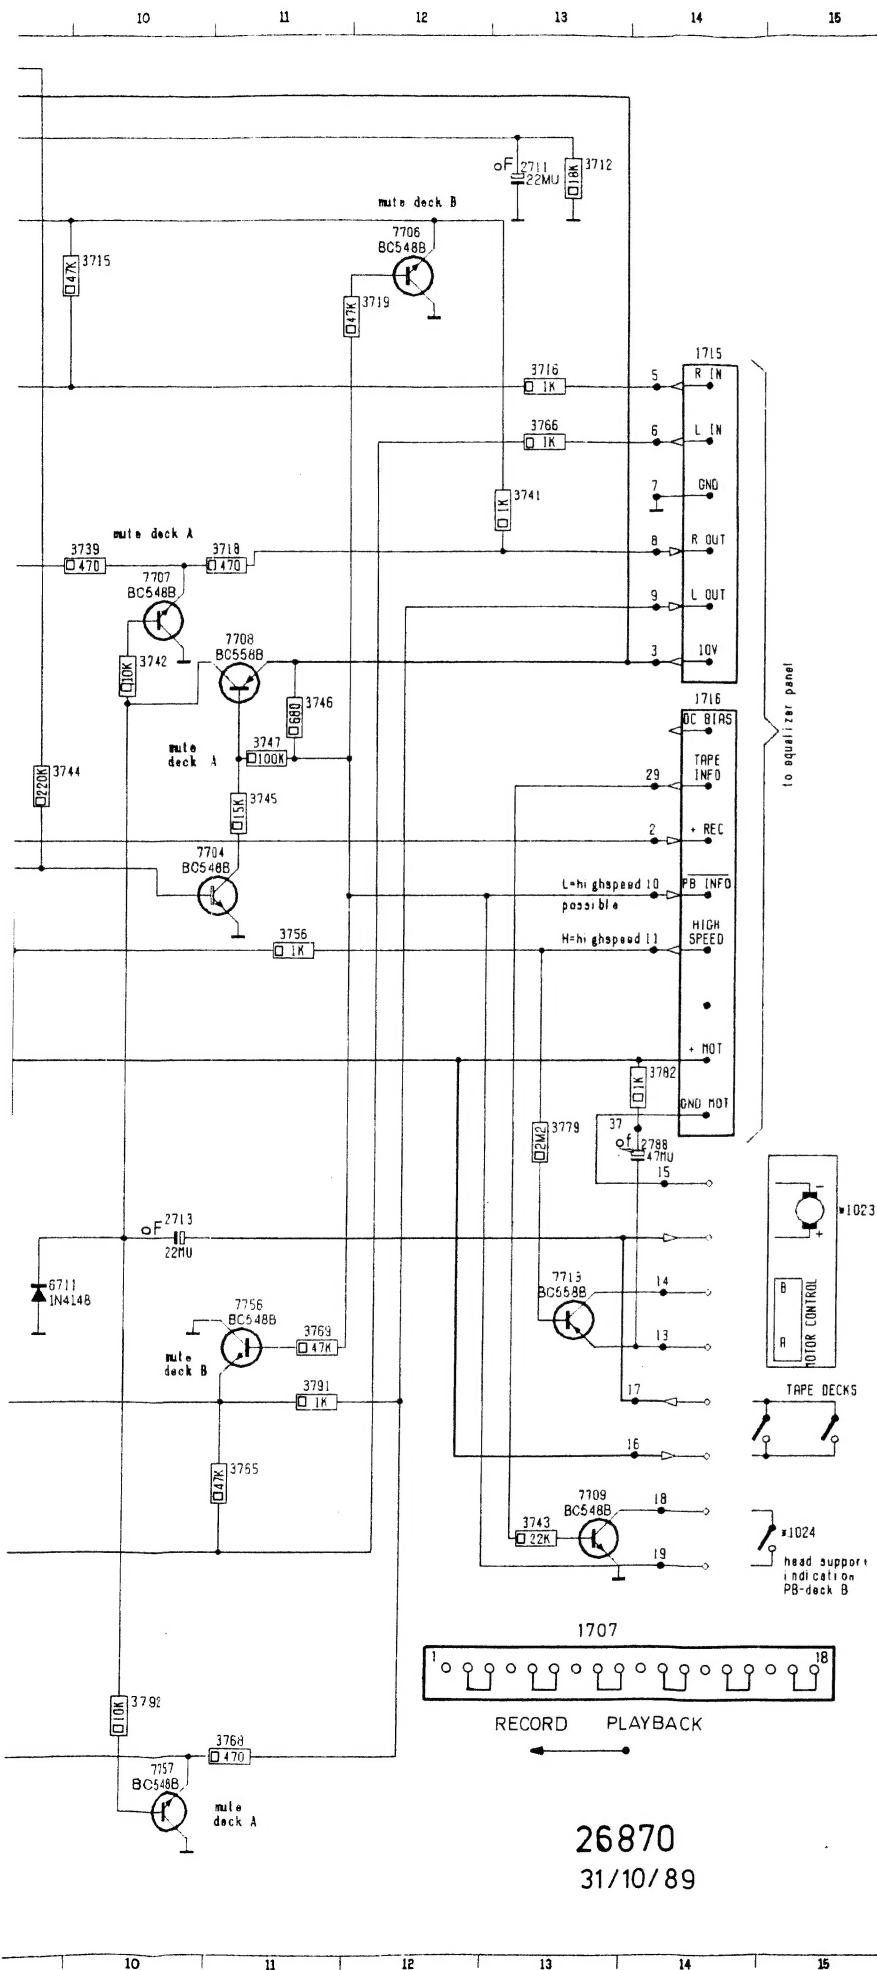

** a The maximum permissible speed deviation is 2%.
Moreover, the wow and flutter value can be read.
This value should not exceed 0.35%.

SELF-TEST PROCEDURE

When holding the program-key and preset- up key down during power up the EEROM is loaded after which the display lights completey until both keys are released.

The loaded information are as follows:

Preset	Frequency			Band
		POL	USA	FM
0	87.50	65.00	87.5	
1	97.00	65.00	106.5	
2	98.00	65.00	87.5

GB WARNING

All ICs and many other semi-conductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically. When repairing, make sure that you are connected with the same potential as the mass of the set via a wrist wrap with resistance. Keep components and tools also at this potential.

F ATTENTION

Tous les IC et beaucoup d'autres semi-conducteurs sont sensibles aux décharges statiques (ESD). Leur longévité pourrait être considérablement écourtée par le fait qu'aucune précaution n'est prise à leur manipulation. Lors de réparations, s'assurer de bien être relié au même potentiel que la masse de l'appareil et enfiler le bracelet serti d'une résistance de sécurité. Veiller à ce que les composants ainsi que les outils que l'on utilise soient également à ce potentiel.

ESD

D WARNUNG

Alle ICs und viele andere Halbleiter sind empfindlich gegenüber elektrostatischen Entladungen (ESD). Unsorgfältige Behandlung im Reparaturfall kan die Lebensdauer drastisch reduzieren. Veranlassen Sie, dass Sie im Reparaturfall über ein Pulsarmband mit Widerstand verbunden sind mit dem gleichen Potential wie die Masse des Gerätes. Bauteile und Hilfsmittel auch auf dieses gleiche Potential halten.

NL WAARSCHUWING

Alle IC's en vele andere halfgeleiders zijn gevoelig voor electrostatische ontladingen (ESD). Onzorgvuldig behandelen tijdens reparatie kan de levensduur drastisch doen verminderen. Zorg ervoor dat u tijdens reparatie via een polsband met weerstand verbonden bent met hetzelfde potentiaal als de massa van het apparaat. Houd componenten en hulpmiddelen ook op ditzelfde potentiaal.

I AVVERTIMENTO

Tutti IC e parecchi semi-conduttori sono sensibili alle scariche statiche (ESD). La loro longevità potrebbe essere fortemente ridatta in caso di non osservazione della più grande cauzione alla loro manipolazione. Durante le riparazioni occorre quindi essere collegato allo stesso potenziale che quello della massa dell'apparecchio tramite un braccialeto a resistenza. Assicurarsi che i componenti e anche gli utensili con quali si lavora siano anche a questo potenziale.

GB

Safety regulations require that the set be restored to its original condition and that parts which are identical with those specified, be used.

NL

Veiligheidsbepalingen vereisen, dat het apparaat bij reparatie in zijn oorspronkelijke toestand wordt teruggebracht en dat onderdelen, identiek aan de gespecificeerde, worden toegepast.

F

Les normes de sécurité exigent que l'appareil soit remis à l'état d'origine et que soient utilisées les pièces de rechange identiques à celles spécifiées.

D

Bei jeder Reparatur sind die geltenden Sicherheitsvorschriften zu beachten. Der Originalzustand des Geräts darf nicht verändert werden; für Reparaturen sind Original-Ersatzteile zu verwenden.

I

Le norme di sicurezza esigono che l'apparecchio venga rimesso nelle condizioni originali e che siano utilizzati i pezzi di ricambio identici a quelli specificati.

Service

For repair information of the Record Player
see Service Manual of Record Player HP7D283MQ-1

For repair information of the cassette mechanism
see Service Manual of Tape Transport RDN/RDR
General documentation and RDN-1

Service Manual

For Service information we refer to the manual
AS9400/22

AS9400/22R refers to AS9400/22

Service Manual

(GB) MAINTENANCE

It is recommended to clean the recorder after approx. 500 hours of operation.

To be cleaned with alcohol or spirit

- Erase head
- Recording/playback head
- Belts
- Capstan
- Pressure roller

(F) ENTRETIEN

L'appareil devra être nettoyé après env. 500 heures de marche aux points les plus importants.

Nettoyer les éléments suivants à l'alcool ou à l'alcool à brûler:

- Tête effacement
- Tête enregistrement/reproduction
- Corroies
- Cabestan
- Galet presseur

(NL) ONDERHOUD

Aanbevolen wordt het apparaat na ca. 500 bedrijfsuren schoon te maken

Schoonmaken met alcohol of spiritus:

- Wiskop
- Opneem-/weergeefkop
- Snaren
- Toonas
- Drukrol

(D) WARTUNG

Es empfiehlt sich, das Gerät nach ca. 500 Betriebsstunden zu reinigen

Reinigen mit Alkohol oder Spiritus:

- Löschkopf
- Aufnahme/Wiedergabe-Kopf
- Antriebsriemen
- Tonachse
- Andruckrolle

(I) MANUTENZIONE

E consigliabile pulire l'apparecchio dopo circa 500 ore di funzionamento ai punti principali.

Pulire con alcool

- Testina di cancellazione
- Testina di registrazione/riproduzione
- Cinghie
- Capstan
- Rullo preminastro

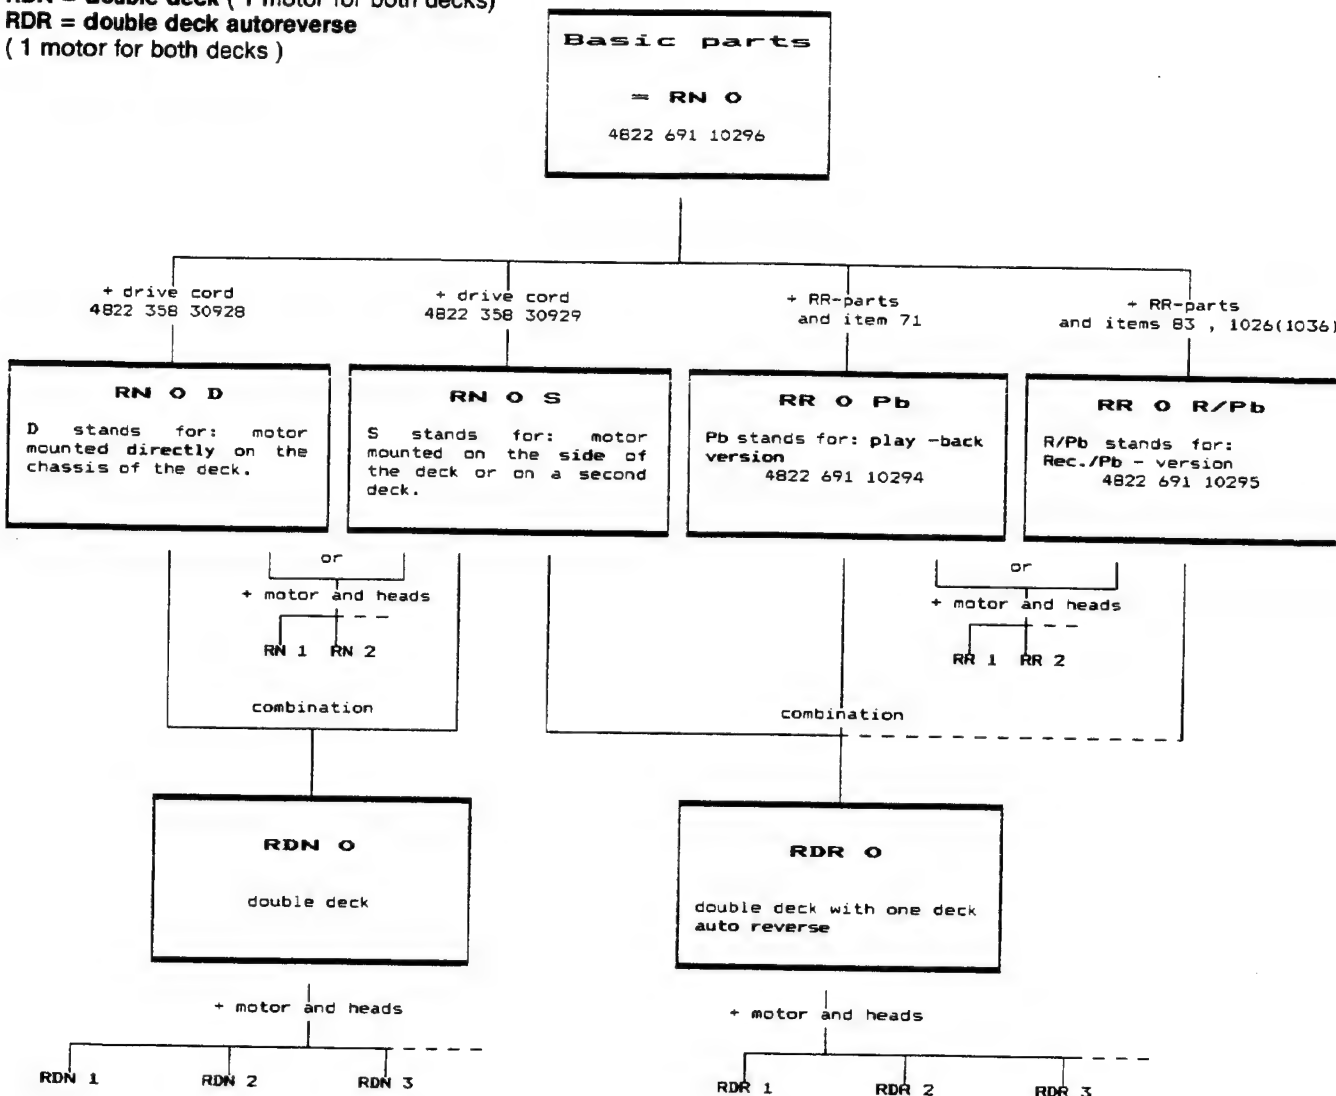

RN / RR - system:

RN = single deck

RR = single deck autoreverse -

RDN = double deck (1 motor for both decks)

RDR = double deck autoreverse
(1 motor for both decks)

(GB)

Version 0 stands for deck without motor and heads. The various motors and heads give the various versions of tapetransports.

For codenumbers of motors and heads see separate manual of the corresponding tapetransport - version.

(F)

La version 0 correspond á une mécanique sans moteur ni têtes. Ce sont eu fait les différents moteurs et têtes qui sont de terminants pour le n° que porte une certaine version d'une mécanique.

Veuillez vous reporter á la Documentation traitant d'un version précise en matière de codes des moteurs et des têtes.

(NL)

Versie 0 staat voor een loopwerk zonder motor en magneetkoppen. Der verschillende motoren en koppen bepalen der verschillende loopwerkversies.

De codenummers van de motoren en koppen zijn vermeld in de documentatie van de betreffende loopwerkversie.

(D)

Version 0 steht für : Laufwerk ohne Motor und Köpfe. Die verschiedenen Motoren und Köpfe bestimmen die verschiedenen Versionen der Laufwerke.

Die Codenummern der Motoren und Köpfe entnehmen Sie bitte der Dokumentation der betreffenden Version.

(I)

La versione 0 corrisponde ad un meccanismo privo di motore e testine. Infatti sono i motori e le testine che determinano il numero di codice di una certa versione di un meccanismo.

Per quanto concerne i codici per motori e testine, riferirsi alla Documentazione de Servizio della versione precisa di cui si tratta.

SERVICE HINTS

GB DISMANTLING

- **Removal of the pressure roller 40+41 (76+73)**
Press locklug of headsupport aside and pull up lever 40 (73).
- **Removal of take up clutch 402**
Press locklugs apart (e.g. with a small pair of tweezers) and pull up 402.
- **Head support**
Cannot be removed because suppression spring 39 has to be assembled with a special tool which is not available in the workshops.

ADJUSTMENTS and CHECKS

- **Check of pressure roller force** against capstan:
The force of the pressure roller against the capstan should be 240 ± 30 p.
Measuring method:
Pb mode with arbitrary cassette. Push the pressure roller with a spring pressure gauge (4822 395 80028) away from the capstan – see fig.2
Read force just in that moment when tape travel stops. This pressure cannot be adjusted!
- **Take up clutch 402**
The torque can be measured with friction test cassette 4822 395 30054 in play mode.
Requirement:
take up torque: $40 - 65$ pcm
(permissible variation 5 pcm)
supplying reel: $2 - 4$ pcm
- **FF/REW torque**
Use friction testcassette 4822 395 30054
FF- or Rew - mode
Stop supplying reel by hand and read friction force – requirement: $55 - 90$ pcm
- **Check of tape travel and capstan adjustment:**
Use mirror cassette 4822 395 30058 in play mode.
If the tape moves up or down at the capstan the capstan has to be adjusted perpendicularly with the flywheel bearing 5.
The tape should travel straight and smoothly between the tapeguides and along the capstan. Small deviations in this pattern are permissible since their effect is negligible with a normal cassette.
Attention: In case of a reverse deck it is important to check tape travel in both directions after adjustment of the azimuth of the Rec./Pb – head – repeat if necessary.
For **adjustment of the azimuth** of the Rec./Pb – head and the **tape speed** refer to the concerning service manual of the set.

NL SERVICE-HINTS

DEMONTAGE

- **Verwijderen van aandrukrol 40+41 (76+73)**
Duw de vergrendellip van de kopsteun opzij en trek hefboom 40 (73) omhoog.
- **Verwijderen van opwikkelkoppeling 402**
Duw de vergrendellippen opzij (bijvoorbeeld met een klein pincet) en trek de koppeling 402 omhoog.
- **Kopsteun**
De kopsteun kan niet worden verwijderd omdat voor de montage van drukveer 39 een speciaal stuk gereedschap is vereist dat in een werkplaats niet voorhanden is.

AFSTELLINGEN en CONTROLES

- **Controleren van de kracht van de aandrukrol** tegen de kaapstander:
De druk van de aandrukrol tegen de kaapstander moet zijn 240 ± 30 p.
Meetmethode:
Plaats een willekeurige cassette en druk de weergavetoets in. Trek de aandrukrol met een veerdrukmeter (4822 395 80028) weg van de kaapstander – zie afbeelding 2.
Lees de waarde af precies op het moment dat de band stopt.
Deze druk kan niet worden bijgesteld.
- **Opwikkelkoppeling 402**
Het koppel kan worden gemeten met behulp van de frictietestcassette 4822 395 30054 in de weergavestand.
Eis:
opwikkelkoppel: $40 - 65$ pcm
(toegestane afwijking 5 pcm)
afwikkelspoel: $2 - 4$ pcm
- **koppel bij vooruit-/terugspoelen**
Gebruik frictietestcassette 4822 395 30054 in de stand vooruitspoelen of terugspoelen.
Houd de afwikkelspoel met de hand stil en lees de wrijvingskracht af – eis: $55 - 90$ pcm.
- **Controleren van bandtransport en kaapstander-instelling:**
Gebruik spiegelcassette 4822 395 30058 in de stand weergeven.
Als de band bij de kaapstander op en neer gaat, moet de kaapstander verticaal worden bijgesteld met behulp van vliegwiellager 5.
De band moet recht en soepel tussen de bandgeleiders langs de kaapstander lopen. Kleine afwijkingen in dit patroon zijn toelaatbaar omdat het effect ervan bij een normale cassette te verwaarlozen is.
Aandacht: In geval van een deck dat zowel kan opnemen als weergeven, is het belangrijk om na de azimuthinstelling van de opname-/weergavekop het bandtransport in beide richtingen te controleren. Indien nodig de instelling herhalen.
Voor de **azimuthinstelling** van de weergave-/opnamekop en de **bandsnelheid** gelieve u de servicehandleiding van het betreffende apparaat te raadplegen.

F CONSEILS D'ENTRETIEN

DEMONTAGE

Démontage du galet presseur 40+41 (76+73) Poussez sur le côté la patte de serrage du support de la tête de lecture et remontez le levier 40 (73).

Démontage de la griffe enrouleuse 402

Poussez à l'écart les pattes de serrage (par exemple avec des pincettes) et tirez la griffe 402 vers le haut.

Support de tête de lecture

Ne peut être retiré car le ressort de suppression 39 doit être monté au moyen d'un outil spécial non disponible dans les ateliers.

REGLAGES ET VERIFICATIONS

- **Vérification de la pression des galets presseurs** contre le cabestan :
La pression exercée contre le cabestan doit être de 240 ± 30 p.
Méthode de mesure :
En mode lecture avec une cassette arbitraire.

Eloignez du cabestan le galet presseur avec un manomètre à ressorts (4822 395 80028)– Fig.2 Lisez la pression au moment où la bande cesse de défiler. Cette pression ne peut pas être réglée !

- **Griffe enrouleuse 402**

Le moment de torsion peut être mesuré à l'aide de la cassette de test à friction 4822 395 30054 en mode lecture.

Condition requise :

Moment de torsion de l'enrouleuse : 40–65 MIC

Variation autorisée : 5 MIC

Bobine débitrice : 2 – 4 MIC

- **Moment de torsion FF/REW (bobinage rapide/rebobinage)**

Utilisez la cassette de test à friction 4822 395 30054

Mode bobinage rapide ou rebobinage.

Arrêtez la bobine débitrice à la main et lisez la force de friction: 55 – 90 MIC exigés

- **Contrôle du défilement de bande et du réglage du cabestan :**

Utilisez la cassette à miroir 4822 395 30058 en mode lecture Si la bande se déplace vers le haut ou vers le bas du cabestan, vous devez ajuster le cabestan perpendiculairement avec le palier 5 du volant.

La bande doit défiler en ligne droite et doucement entre les guides de bande. De faibles déviations de ce modèle sont autorisées car leur effet est négligeable avec une cassette conven- tionnelle.

Attention :

Dans le cas d'une platine cassette à inversion de défilement, il est très important de vérifier le défilement de bande dans les deux sens après le réglage de l'azimut de la tête de lecture/enregistrement.

Répétez cette opération si nécessaire.

Pour le réglage de l'azimut de la tête de lecture/enregistrement et la vitesse de bande, reportez-vous au manuel d'entretien correspondant.

D AUSBAU

- **Andruckrolle 40+41 (76+73) entfernen:**

Sperrzunge der Kopfträgerplatte zur Seite drücken und Hebel 40 (73) hochziehen.

- **Aufwickelkupplung 402 entfernen:**

Rasthaken auseinanderdrücken (z.B. mit spitzer Pinzette) und gleichzeitig 402 hochziehen.

- **Kopfträgerplatte**

Kann nicht ausgebaut werden, da Druckfeder 39 nur mit einem Spezialwerkzeug montiert werden kann.

EINSTELLUNGEN und KONTROLLEN

- **Kontrolle des Anpreßrollendruckes**

Der Druck der Anpreßrolle 41 (76) an die Tonachse soll 240 ± 30 p betragen.

Meßmethode: Stellung "play" mit beliebiger Kassette. Anpreßrolle mit einer Federwaage (4822 395 80028) – Ansetzpunkt siehe Fig. 2 – von der Tonachse wegdrücken. Lesen Sie die Kraft in dem Moment ab, wenn der Bandtransport stoppt. Dieser Druck kann nicht eingestellt werden!

- **Aufwickelrutschkupplung 402**

Das Aufwickelmoment wird mit der Meßkassette 4822 395 30054 in Stellung "play" gemessen.

Anforderung:

Aufwickelmoment: 40 – 65 pcm

(zulässige Schwankung 5 pcm)

Gegenzug: 2 – 4 pcm

- **FF / REW – Moment**

Stellung "FF" bzw. "REW"

Meßkassette 4822 395 30054 verwenden.

Jeweiligen Abwickelteller mit der Hand blockieren und Moment ablesen.

Anforderung: 50 – 90 pcm

- **Kontrolle des Bandlaufs und der Tonwelleneinstellung:**

Verwenden Sie Spiegelkassette 4822 395 30058 in Stellung "play".

Wenn sich das Band an der Tonwelle nach oben oder unten bewegt, muß die Tonwelle mit dem Exzenterlager 5 senkrecht gestellt werden.

Das Band soll gerade und genau fluchtend zwischen den Bandführungen der Köpfe und an der Tonwelle entlang laufen. Geringe Abweichungen in diesem Bild sind zulässig, da sie bei einer normalen Kassette nicht beeinträchtigend wirken.

Achtung: Bei Reverse – Laufwerken ist es wichtig, nach Einstellung des Azimuths den Bandlauf in beiden Richtungen zu kontrollieren ----- falls notwendig, wiederholen.

Für Einstellung des Azimuths des REC/Pb –Kopfes und der Bandgeschwindigkeit siehe Servicedokumentation des betreffenden Gerätes.

I CONSIGLI DI SERVIZIO ASSISTENZA

SMONTAGGIO

- **Smontaggio del rullino pressanastro 50+41 (76+73)**

Spingere la linguetta di bloccaggio del supporto delle testine lateralmente e tirare in alto la leva 40 (73).

- **Smontaggio dell'accoppiamento di avvolgimento 402**

Spingere le linguette di bloccaggio lateralmente (p.e. con una piccola pinza) e tirare in alto l'accoppiamento 402.

- **Supporto delle testine**

Non è possibile smontare il supporto delle testine dato che lo smontaggio della molla di spinta 39 richiede un attrezzo speciale che non è disponibile in un'officina.

REGISTRAZIONI e CONTROLLI

- **Controllo della forza del rullino pressanastro contro il rullino trainonastro:**

La forza del rullino pressanastro contro il rullino trainonastro deve essere di 240 ± 30 p.

Metodo di misurazione:

Inserire una qualsiasi cassetta e premere il tasto di riproduzione. Allontanare il rullino pressanastro con un misuratore della pressione elicoidale (4822 395 80028) dal rullino trainonastro (fig. 2).

Leggere il valore proprio al momento che il nastro si arresta.

Non è possibile correggere questa pressione!

- **Accoppiamento di avvolgimento 402**

La coppia può essere misurata con l'aiuto della cassetta di controllo della frizione 4822 395 30054 nel modo di riproduzione.

Valori prescritti:

Coppia di avvolgimento: 40–65 pcm.

(tolleranza: 5 pcm)

Bobina di svolgimento : 2–4 pcm.

- **Coppia di avvolgimento/riavvolgimento**

Servirsi della cassetta di controllo della frizione 4822 395 30054 nel modo di avvolgimento o riavvolgimento.

Bloccare con la mano la rotazione della bobina di svolgimento e leggere la forza di frizione.

Valore prescritto: 55–90 pcm.

- Controllo della regolazione del trasporto del nastro e del rullino trainonastro

Servirsi della cassetta a specchio 4822 395 30058 nel modo di riproduzione.

Se il nastro si sposta in alto ed in basso dalla parte del rullino trainonastro, registrare il rullino trainonastro in senso verticale con l'aiuto del cuscinetto del volano 5.

Il nastro deve passare ben dritto ed agevolmente tra le guide del nastro lungo il rullino trainonastro. Sono consentite piccole deviazioni dato che il loro effetto è trascurabile con l'uso di una cassetta normale.

Attenzione: in caso l'apparecchio permetta sia la registrazione che la riproduzione, a registrazione avvenuta dell'azimut della testina di registrazione/riproduzione è importante controllare il trasporto del nastro nei due sensi. Se necessario, ripetere la registrazione.

Per la registrazione dell'azimut della testina di registrazione/riproduzione e la velocità di trasporto del nastro, consultare il manuale di servizio assistenza dell'apparecchio in questione.

FIG 2

MDA.00429
T07/646

REMOVAL OF ROTATION HEAD

MOUNTING OF ROTATION HEAD

Rack pos.81 has to be aligned before mounting the rotation head:

- 1) Press DIRECTION - key once. Turn flywheel by hand as long as the alignment pin of rack pos.81 is in line with the alignment marking on the headsupport --> see sketch.
- 2) Hold the head in normal (horizontal) position - marking on the head is on top.
- 3) Snap head into headsupport. remark: If you follow the above instruction the teeth of the gear will fit together.
- 4) Change the direction as described under "removal of rotation head" and check if the rotation head turns to the correct position. If the head is not in horizontal position repeat and take care of exact alignment of rack pos.81 and horizontal position of the head while mounting.

REMOVAL OF HEADSUPPORT

- 1) Feed hook on the rear of the headsupport into the chassis first. Then lower the front part to the chassis and press headsupport towards back until locklugs snap in. Attention: In case of a reverse deck take care of fitting the pinch roller pressing springs correctly into the guiding slots of the chassis.
- 2) Use a little screwdriver as a guiding and compress compression spring until locklug arrests.

Version 0 stands for deck without motor and heads. The various motors and heads give the various versions of tapetransports.

For codenumbers of motors and heads see separate manual of the corresponding tapetransport - version.

F

La version 0 correspond á une mécanique sans moteur ni têtes. Ce sont eu fait les différents moteurs et têtes qui sont de terminants pour le n° que porte une certaine version d'une mécanique.

Veuillez vous reporter á la Documentation traitant d'un version précise en matière de codes des moteurs et des têtes.

NL

Versie 0 staat voor een loopwerk zonder motor en magneetkoppen. Der verschillende motoren en koppen bepalen der verschillende loopwerkversies.

De codenummers van de motoren en koppen zijn vermeld in de documentatie van de betreffende loopwerkversie.

D

Version 0 steht für : Laufwerk ohne Motor und Köpfe. Die verschiedenen Motoren und Köpfe bestimmen die verschiedenen Versionen der Laufwerke.

Die Codenummern der Motoren und Köpfe entnehmen Sie bitte der Dokumentation der betreffenden Version.

I

La versione 0 corrisponde ad un meccanismo privo di motore e testine. Infatti sono i motori e le testine che determinano il numero di codice di una certa versione di un meccanismo.

Per quanto concerne i codici per motori e testine, riferirsi alla Documentazione de Servizio della versione precisa di cui si tratta.

SERVICE HINTS

GB DISMANTLING

- **Removal of the pressure roller 40+41 (76+73)**
Press locklug of headsupport aside and pull up lever 40 (73).
- **Removal of take up clutch 402**
Press locklugs apart (e.g. with a small pair of tweezers) and pull up 402.

ADJUSTMENTS and CHECKS

- **Check of pressure roller force** against capstan:
The force of the pressure roller against the capstan should be 240 ± 30 p.
Measuring method:
Pb mode with arbitrary cassette. Push the pressure roller with a spring pressure gauge (4822 395 80028) away from the capstan – see fig.2
Read force just in that moment when tape travel stops.
This pressure cannot be adjusted!
- **Take up clutch 402**
The torque can be measured with friction test cassette 4822 395 30054 in play mode.
Requirement:
take up torque: 40 – 65 pcm
(permissible variation 5 pcm)
supplying reel: 2 – 4 pcm
- **FF/REW torque**
Use friction testcassette 4822 395 30054
FF– or Rew – mode
Stop supplying reel by hand and read friction force – requirement: 55 – 90 pcm
- **Check of tape travel and capstan adjustment:**
Use mirror cassette 4822 395 30058 in play mode.
If the tape moves up or down at the capstan the capstan has to be adjusted perpendicularly with the flywheel bearing 5.
The tape should travel straight and smoothly between the tapeguides and along the capstan. Small deviations in this pattern are permissible since their effect is negligible with a normal cassette.
Attention: In case of a reverse deck it is important to check tape travel in both directions after adjustment of the azimuth of the Rec./Pb – head – repeat if necessary.

For **adjustment of the azimuth** of the Rec./Pb – head and the **tape speed** refer to the concerning service manual of the set.

NL SERVICE-HINTS

DEMONTAGE

- **Verwijderen van aandrukrol 40+41 (76+73)**
Duw de vergrendelclip van de kopsteun opzij en trek hefboom 40 (73) omhoog.
- **Verwijderen van opwikkelkoppeling 402**
Duw de vergrendellippen opzij (bijvoorbeeld met een klein pincet) en trek de koppeling 402 omhoog.

AFSTELLINGEN en CONTROLES

- **Controleren van de kracht van de aandrukrol** tegen de kaapstander:
De druk van de aandrukrol tegen de kaapstander moet zijn 240 ± 30 p.
Meetmethode:
Plaats een willekeurige cassette en druk de weergavetoets in. Trek de aandrukrol met een veerdrukmeter (4822 395 80028) weg van de kaapstander – zie afbeelding 2.
Lees de waarde af precies op het moment dat de band stopt.
Deze druk kan niet worden bijgesteld.
- **Opwikkelkoppeling 402**
Het koppel kan worden gemeten met behulp van de frictietestcassette 4822 395 30054 in de weergavestand.
Eis:
opwikkelkoppel: 40 – 65 pcm
(toegestane afwijking 5 pcm)
afwikkelspoel: 2 – 4 pcm
- **koppel bij vooruit-/terugspoelen**
Gebruik frictietestcassette 4822 395 30054 in de stand vooruitspoelen of terugspoelen.
Houd de afwikkelspoel met de hand stil en lees de wrijvingskracht af – eis: 55 – 90 pcm.
- **Controleren van bandtransport en kaapstander-instelling:**
Gebruik spiegelcassette 4822 395 30058 in de stand weergeven.
Als de band bij de kaapstander op en neer gaat, moet de kaapstander verticaal worden bijgesteld met behulp van vliegwiellager 5.
De band moet recht en soepel tussen de bandgeleiders langs de kaapstander lopen. Kleine afwijkingen in dit patroon zijn toelaatbaar omdat het effect ervan bij een normale cassette te verwaarlozen is.
Aandacht: In geval van een deck dat zowel kan opnemen als weergeven, is het belangrijk om na de azimuthinstelling van de opname-/weergavekop het bandtransport in beide richtingen te controleren. Indien nodig de instelling herhalen.
Voor de **azimuthinstelling** van de weergave-/opnamekop en de **bandsnelheid** gelieve u de servicehandleiding van het betreffende apparaat te raadplegen.

F CONSEILS D'ENTRETIEN

DEMONTAGE

Démontage du galet presseur 40+41 (76+73) Poussez sur le côté la patte de serrage du support de la tête de lecture et remontez le levier 40 (73).

Démontage de la griffe enrouleuse 402
Poussez à l'écart les pattes de serrage (par exemple avec des pincettes) et tirez la griffe 402 vers le haut.

dans les ateliers.

REGLAGES ET VERIFICATIONS

- **Vérification de la pression des galets presseurs** contre le cabestan :
La pression exercée contre le cabestan doit être de 240 ± 30 p.
Méthode de mesure :
En mode lecture avec une cassette arbitraire.

Eloignez du cabestan le galet presseur avec un manomètre à ressorts (4822 395 80028)– Fig.2 Lisez la pression au moment où la bande cesse de défilier. Cette pression ne peut pas être réglée !

– **Griffe enrouleuse 402**

Le moment de torsion peut être mesuré à l'aide de la cassette de test à friction 4822 395 30054 en mode lecture.

Condition requise :

Moment de torsion de l'enrouleuse : 40–65 MIC

Variation autorisée : 5 MIC

Bobine débitrice : 2 – 4 MIC

– **Moment de torsion FF/REW (bobinage rapide/rebobinage)**

Utilisez la cassette de test à friction 4822 395 30054

Mode bobinage rapide ou rebobinage.

Arrêtez la bobine débitrice à la main et lisez la force de friction: 55 – 90 MIC exigés

– **Contrôle du défilement de bande et du réglage du cabestan :**

Utilisez la cassette à miroir 4822 395 30058 en mode lecture Si la bande se déplace vers le haut ou vers le bas du cabestan, vous devez ajuster le cabestan perpendiculairement avec le palier 5 du volant.

La bande doit défilier en ligne droite et doucement entre les guides de bande. De faibles déviations de ce modèle sont autorisées car leur effet est négligeable avec une cassette conven- tionnelle.

Attention :

Dans le cas d'une platine cassette à inversion de défilement, il est très important de vérifier le défilement de bande dans les deux sens après le réglage de l'azimut de la tête de lecture/enregistrement.

Répétez cette opération si nécessaire.

Pour le réglage de l'azimut de la tête de lecture/enregistrement et la vitesse de bande, reportez-vous au manuel d'entretien correspondant.

⓪ AUSBAU

– **Andruckrolle 40+41 (76+73) entfernen:**

Sperrung der Kopfrägerplatte zur Seite drücken und Hebel 40 (73) hochziehen.

– **Aufwickelkupplung 402 entfernen:**

Rasthaken auseinanderdrücken (z.B. mit spitzer Pinzette) und gleichzeitig 402 hochziehen.

EINSTELLUNGEN und KONTROLLEN

– **Kontrolle des Anpreßrollendruckes**

Der Druck der Anpreßrolle 41 (76) an die Tonachse soll 240 ± 30 p betragen.

Meßmethode: Stellung "play" mit beliebiger

Kassette.Anpreßrolle mit einer Federwaage

(4822 395 80028) – Ansetzpunkt siehe Fig. 2 – von der Tonachse wegdrücken. Lesen Sie die Kraft in dem Moment ab, wenn der Bandtransport stoppt. Dieser Druck kann nicht eingestellt werden!

– **Aufwickelrutschkupplung 402**

Das Aufwickelmoment wird mit der Meßkassette 4822 395 30054 in Stellung "play" gemessen.

Anforderung:

Aufwickelmoment: 40 – 65 pcm

(zulässige Schwankung 5 pcm)

Gegenzug: 2 – 4 pcm

– **FF / REW – Moment**

Stellung "FF" bzw. "REW"

Meßkassette 4822 395 30054 verwenden.

Jeweiligen Abwickelteller mit der Hand blockieren und Moment ablesen.

Anforderung: 50 – 90 pcm

– **Kontrolle des Bandlaufs und der Tonwelleneinstellung:**

Verwenden Sie Spiegelkassette 4822 395 30058 in Stellung "play".

Wenn sich das Band an der Tonwelle nach oben oder unten bewegt, muß die Tonwelle mit dem Exzenterlager 5 senkrecht gestellt werden.

Das Band soll gerade und genau fluchtend zwischen den Bandführungen der Köpfe und an der Tonwelle entlang laufen. Geringe Abweichungen in diesem Bild sind zulässig, da sie bei einer normalen Kassette nicht beeinträchtigend wirken.

Achtung: Bei Reverse – Laufwerken ist es wichtig, nach Einstellung des Azimuths den Bandlauf in beiden Richtungen zu kontrollieren – falls notwendig, wiederholen.

Für Einstellung des Azimuths des REC/Pb –Kopfes und der Bandgeschwindigkeit siehe Servicedokumentation des betreffenden Gerätes.

Ⓛ CONSIGLI DI SERVIZIO ASSISTENZA

SMONTAGGIO

– **Smontaggio del rullino pressanastro 50+41 (76+73)**

Spingere la linguetta di bloccaggio del supporto delle testine lateralmente e tirare in alto la leva 40 (73).

– **Smontaggio dell'accoppiamento di avvolgimento 402**

Spingere le linguette di bloccaggio lateralmente (p.e. con una piccola pinza) e tirare in alto l'accoppiamento 402.

REGISTRAZIONI e CONTROLLI

– **Controllo della forza del rullino pressanastro contro il rullino trainonastro:**

La forza del rullino pressanastro contro il rullino trainonastro deve essere di 240 ± 30 p.

Metodo di misurazione:

Inserire una qualsiasi cassetta e premere il tasto di riproduzione. Allontanare il rullino pressanastro con un misuratore della pressione elicoidale (4822 395 80028) dal rullino trainonastro (fig. 2).

Leggere il valore proprio al momento che il nastro si arresta.

Non è possibile correggere questa pressione!

– **Accoppiamento di avvolgimento 402**

La coppia può essere misurata con l'aiuto della cassetta di controllo della frizione 4822 395 30054 nel modo di riproduzione.

Valori prescritti:

Coppia di avvolgimento: 40–65 pcm.

(tolleranza: 5 pcm)

Bobina di svolgimento : 2–4 pcm.

– **Coppia di avvolgimento/riavvolgimento**

Servirsi della cassetta di controllo della frizione 4822 395 30054 nel modo di avvolgimento o riavvolgimento.

Bloccare con la mano la rotazione della bobina di svolgimento e leggere la forza di frizione.

Valore prescritto: 55–90 pcm.

- Controllo della regolazione del **trasporto del nastro** e del rullino trainonastro

Servirsi della cassetta a specchio 4822 395 30058 nel modo di riproduzione.

Se il nastro si sposta in alto ed in basso dalla parte del rullino trainonastro, registrare il rullino trainonastro in senso verticale con l'aiuto del cuscinetto del volano 5.

Il nastro deve passare ben dritto ed agevolmente tra le guide del nastro lungo il rullino trainonastro. Sono consentite piccole deviazioni dato che il loro effetto è trascurabile con l'uso di una cassetta normale.

Attenzione: in caso l'apparecchio permetta sia la registrazione che la riproduzione, a registrazione avvenuta dell'azimut della testina di registrazione/riproduzione è importante controllare il trasporto del nastro nei due sensi. Se necessario, ripetere la registrazione.

Per la **registrazione dell'azimut** della testina di registrazione/riproduzione e la **velocità di trasporto del nastro**, consultare il manuale di servizio assistenza dell'apparecchio in questione.

Service
Service**

Service Manual

(GB) MAINTENANCE

It is recommended to clean the recorder after approx. 500 hours of operation.

To be cleaned with alcohol or spirit

- Erase head
- Recording/playback head
- Capstan
- Pressure roller

(F) ENTRETIEN

L'appareil devra être nettoyé après env. 500 heures de marche aux points les plus importants.

Nettoyer les éléments suivants à l'alcool ou à l'alcool à brûler:

- Tête effacement
- Tête enregistrement/reproduction
- Cabestan
- Galet presseur

(NL) ONDERHOUD

Aanbevolen wordt het apparaat na ca. 500 bedrijfsuren schoon te maken

Schoonmaken met alcohol of spiritus:

- Wiskop
- Opneem-/weergeefkop
- Toonas
- Drukrol

(D) WARTUNG

Es empfiehlt sich, das Gerät nach ca. 500 Betriebsstunden zu reinigen

Reinigen mit Alkohol oder Spiritus:

- Löschkopf
- Aufnahme/Wiedergabe-Kopf
- Tonachse
- Andruckrolle

(I) MANUTENZIONE

E consigliabile pulire l'apparecchio dopo circa 500 ore di funzionamento ai punti principali.

Pulire con alcool

- Testina di cancellazione
- Testina di registrazione/riproduzione
- Capstan
- Rullo preminastro

MOUNTING OF PINCH ROLLER

for autoreverse decks

for single direction decks

REMOVAL OF BEARING PLATE ⑦ ⑥⑦

Begin rearwards as indicated

(GB)

REVERSE MODE -position 2 of mode selector 121

"FF" or "REW": On tape end full "auto shut off" will be activated and "mode selector" will be switched over to "normal mode".

To ensure a reliable switching over of the "mode selector" in case of "full auto shut off" it is necessary that flywheel makes at least 3 turns after switching off the supply. Therefore a **motor shut off-delay** has been added.

(F)

MODE REVERSE (retour en arrière)- position 2 ou sélecteur de mode 121

"FF" ou "REW": En fin de bande, l'arrêt total automatique sera activé et le "sélecteur de mode" commutera sur "mode

normal".

Pour garantir une commutation fiable du "sélecteur de mode" en cas d'arrêt total automatique, il faut que le volant effectue au moins 3 tours après la mise hors circuit. C'est la raison pour laquelle un **retard d'arrêt du moteur** a été intégré.

(I)

MODO REVERSE - posizione 2 del selettore 121

"FF" o "REW": alla fine del nastro nella cassetta, l'apparecchio viene spento automaticamente ed il selettore 121 commutato nel "modo normale".

Onde assicurare allo spegnimento automatico una commutazione affidabile del selettore è necessario che il volano dopo lo spegnimento faccia ancora almeno 3 giri. Per tale ragione è incorporato un ritardo di arresto per il motorino.

(NL)

REVERSE MODE - positie 2 van keuzeschakelaar 121

"FF" of "REW": Aan het einde van de band wordt de automatische uitschakeling geactiveerd en wordt keuzeschakelaar 121 naar "normal mode" geschakeld.

Om bij automatische uitschakeling een betrouwbare omschakeling van de keuzeschakelaar te waarborgen, is het noodzakelijk dat het vliegwiel na de uitschakeling nog minstens 3 omwentelingen maakt.

Om dit te bereiken is een **uitschakelingsvertraging** voor de motor ingebouwd.

(D)

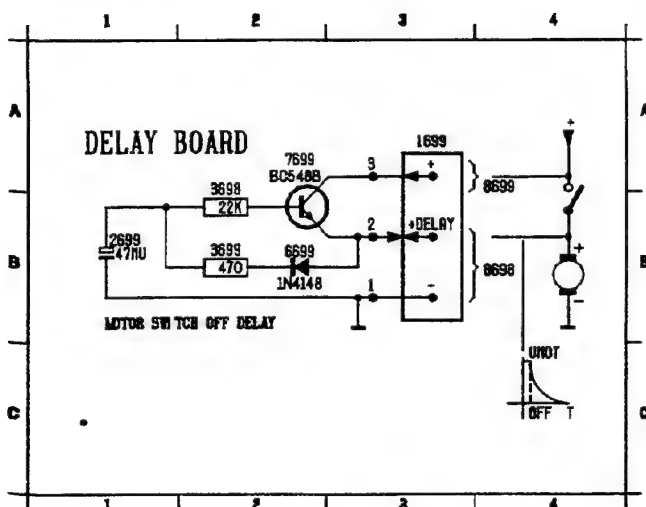

REVERSE MODE -Position 2 des Mode-Selektors 121

"FF" oder "REW": Am Bandende schaltet die automatische Endabschaltung ab und der "Mode Selektor" wird auf "normal mode" umgeschaltet.

Um ein zuverlässiges Umschalten des "Mode Selektors" nach der automatischen Endabschaltung zu gewährleisten, ist es notwendig, dass die Schwunghasse nach dem Abschalten noch mindestens 3 Umdrehungen macht.

Deshalb wurde eine **Motor-Abschaltverzögerung** eingebaut.

GENERAL PARTS RR REC - REVERSE TAPE TRANSPORTS

7/67	4822 520 10718	bearing plate	204	4822 403 70387	lever, recording protection
38/61/212	4822 520 40134	ball, bearing	205	4822 520 20725	bearing, recording protection
40	4822 402 10037	lever, pinch roller right	209	4822 492 33272	spring, tension
41/76	4822 528 70646	pinch roller	402	4822 528 20676	take-up clutch assy
43	4822 404 10853	slide, key lock	404	4822 691 10295	RR-REC/I/0 assy
73	4822 402 10038	lever, pinch roller left	405	4822 691 20665	RR-REC/II/0 assy
74	4822 535 92992	tape guide right	1025	4822 278 90624	switch, direction indication
75	4822 535 92993	tape guide left			
98	4822 358 30928	drive belt RNO D (short)			
106	4822 403 70385	lever, antiselect (WT02 onwards)			

Service Information

CORRECTIONS TO THE SERVICE MANUAL

* Front-page

Maintenance: Statement, that BELTS should be cleaned with alcohol or spirit, is wrong.

Correct: Belts must **n o t** be cleaned with alcohol or spirit !

Reason : Belts are treated with silicone milk to avoid mechanical oscillation.

- * **Block diagram** which describes the modular structure of the RN/RR, RDN/RDR system has to be updated.
For new updated block diagram see annex.

* Service hints

In the service manual there is stated: The head support (pos.56/72) cannot be removed because a special tool is necessary to assemble spring pos.39.

Now an easy method has been found to assemble spring pos.39 without a special tool —> see annex "Service Hints"

* Exploded View RR-parts

Because of the new RR-Recording-types the exploded view for RR parts has been revised. —>
For the new, updated, exploded view see annex.

COMPONENTS ADDED TO THE SERVICE PARTSLIST

pos.	7/67	4822 520 10718	bearing plate
pos.	43	4822 404 10853	slide, key locking
pos.	106	4822 403 70385	lever, antiselect
pos.	404	4822 691 20665	RR RECII/0 assy
pos.	405	4822 691 10295	RR RECII/0 assy

CHANGES IN COARSE OF PRODUCTION

(Only reverse decks RR)

- * To avoid "tape salad" after pressing the PLAY button, lever pos.91 was adapted.
The adapted lever has been used from production week 9004 onwards — hot stamped in chassis **004xA** (x stands for production day 1–5, A or B stands for the shift which the part was produced in).

* **Bearing of rotary head: tolerance in multi-cavity tools adapted.**

Fault: Head jams when turned.

This effect occurs only in tape transports assembled with head supports pos.72 just after production start with multi-cavity tools and appears when the drive is used (or was stored) in a climate of more than 80% relative humidity.

Head supports produced with multi-cavity tools can be identified by a 2 digit marking – see fig.1

Bad head supports, where the failure can occur, have only been used in tape transports produced from production week 9024 up to 9031 – hot stamped in the chassis **024xA up to 031xA** (x stands for the production day 1–5, A or B stands for the shift which the part was produced in).

For service purposes the complete transport mechanism RR0 assy 4822 691 10294 is available.

* **Delay board**

To ensure a reliable switch over of the MODE SELECTOR to “normal mode” after full auto shutoff, an electronic delay-circuit was added to all auto reverse tape transports with production change code **WT01**.

For this electronic delay circuit there were 2 different versions available → for schematic diagrams and assembly drawings see next two pages.

From production week 9042 with change code **WT02** onwards this electronic delay-circuit has been replaced by a mechanical solution:

lever pos. 70 changed

lever pos.106 added 4822 403 70385

Attention: Lever pos.106 is not mounted on all RR0Pb (4822 691 10294), RR-REC1/0 (4822 691 10295) and RR-RECII/0 (4822 691 20665) tape transports, available for service purposes → because of the changed lever pos.70 the auto-shutoff function does not work without lever pos.106!

If a tape transport with change code **WT01** will be exchanged by a tape transport with change code **WT02** lever pos.106 has to be ordered extra and mounted on the new tape transport. → see fig.2

From June 92 onwards it is organized that the tape transports will be delivered with lever pos.106 mounted.
